

Dear Sir

It gives me a great pleasure to apply for a Physics associate Prof. position (15088BR)- Physics department- Texas Tech. University. I taught physics for almost twenty eight years (in three different countries, in five different universities) after I graduated from Kansas State University. I taught many different physics courses (graduate and undergraduate) besides the general physics courses for engineering, medical or science freshmen students.

I feel that my teaching experience will fit with what you are looking for in a faculty member in your institution, and I am looking forward to be a member of your active faculty.

Concerning my research experience, in spite of the harsh research environment usually researchers find in a third world country (like my original home country Jordan, as a result of lacking the needed fund and research equipments for research) I managed to publish about 30 scientific papers, most of it in peer reviewed Journals, and part of this research work was recognized by the TWAS (Third World Academy of Science- Italy) and I was chosen as their physics research prize winner in 1995.

One last thing to note, Recently I got an approval for a GREEN CARD and I am now in Texas, Carrollton till Sept. 16, 2018.

With my deep regards.

Abdellatif AlSharif

Prof. of Physics of Materials
